

**Turbo**  
 Ball bearing and journal bearing turbos  
**Application**  
 GT25, 28 & 30

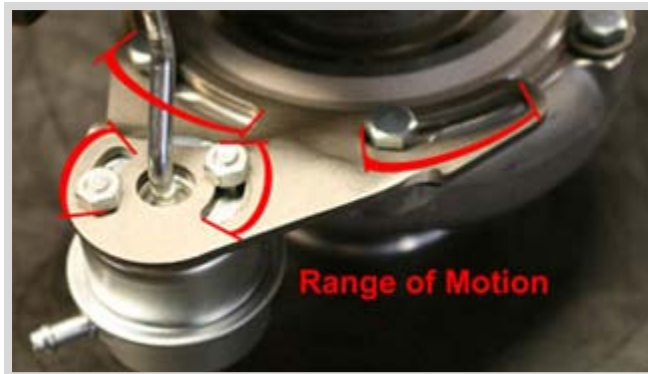

**Garrett**<sup>®</sup>  
 by Honeywell  
**PERFORMANCE**  
 Official EMEA Distributor

## Adjustable actuator

The Garrett® adjustable actuator bracket allows for a significantly greater range of motion to set up the compressor outlet and wastegate can. This provides easier fitment in tight engine bays by giving you the ability to make smaller adjustments to compressor housings clocking than would be possible through the standard bolt adjustments which adjust the compressor outlet at 60° increments on GT25R and GT28R turbochargers. The bracket also allows for redirection of the actuator to keep vacuum lines away from heat or sharp edges.

The new bracket is available for use on GT25R, GT28R and GT30R turbochargers.
